

# CHROMSTOP SA-F

*NON PFOS Chrome Mist Suppressant*  
*Most Economical Non PFOS Product on Market*

## **THE LATEST IN INNOVATION FROM A GLOBAL LEADER COVENTYA.....**

**CHROMSTOP SA-F** is a PFOS Free (as EPA defined is less than 8 carbon chains in length), polyfluorinated liquid product formulated for decorative and hard chrome plating processes

**CHROMSTOP SA-F** lowers the surface tension of the operating solution, which reduces drag-out. This reduces chrome loss and contamination of rinses, reducing subsequent chromium waste treatment requirements. During electrolysis a foam blanket is formed on the surface of the solution, which coupled with the drop in surface tension, minimizes the release of chromic acid mist into the surrounding atmosphere.

**CHROMSTOP SA-F** meets the European Directive (PE-CONS 3660/06, 15915/06 ADD1). This directive along with similar USA regulations restricts the use of PFOS based materials in Decorative and Hard Chromium electroplating processes

**CHROMSTOP SA-F Make Up      0.05-0.1% by vol. (0.5-1.0 ml/L)**
